 - 97% answered yes
- If not, are you now going to have your child vaccinated?
 - 100% answered yes

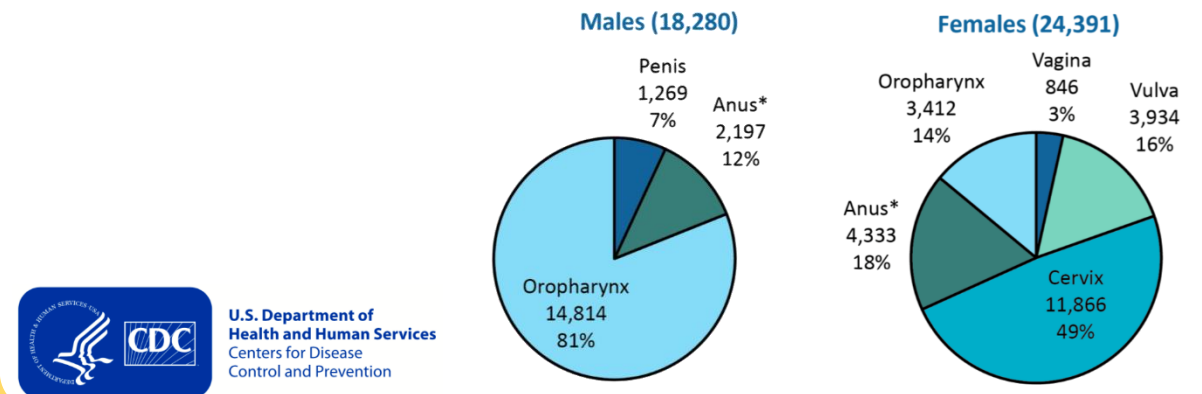

Number of new HPV-associated cancer cases each year

United States Cancer Statistics
DATA BRIEF

No. 4
August 2018

Based on data from 2011 to 2015 about 42,700 new cases of HPV-associated cancers occurred in the United States each year, including about 24,400 among women, and about 18,300 among men.

Cervical cancer is the most common HPV-associated cancer among women, and oropharyngeal cancers (cancers of the back of the throat, including the base of the tongue and tonsils) are the most common among men.

4.2 Cancer Screening Program

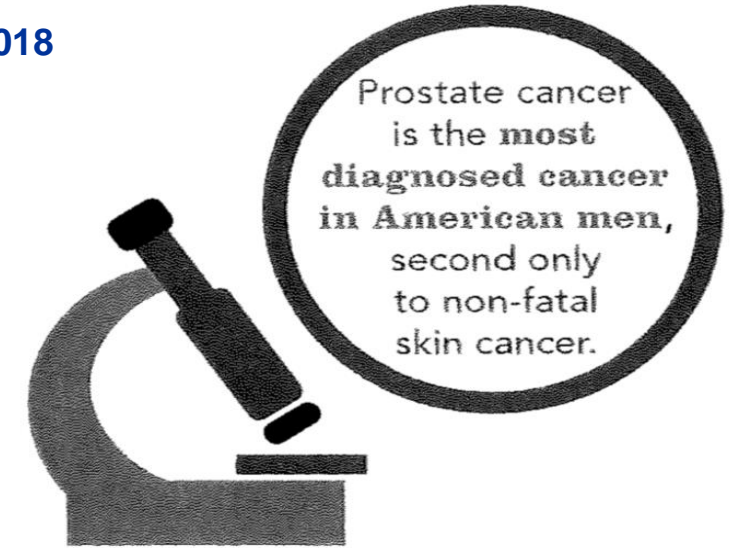

Prostate Screening

WellSpan Sechler Cancer Center – Sept 24, 25, 26, 2018

Program Description: Patients were seen by physicians-Dr. Beltz, Dr. Zorn- WellSpan Urology, Dr. Khan- WellSpan Medical Oncology and Hematology. This included a digital rectal exam and PSA level.

Program Conclusions: 21 patients completed the screening

- 4 patients (19%) were referred to see a physician
 - 3 patients had BPH or urinary symptoms
 - 1 patient had an abnormal suspicious DRE
 - 2 additional patients had elevated PSA levels (>4.0) and their PCP's were notified
 - All patients received a follow up phone call from Nurse Navigator with PSA results and referral to physician as indicated.

1 in 9 American men
will be diagnosed with prostate
cancer in their lifetime.
